Chairman's Message

Dear Students,

I believe it was Alyson Noel who said that "The only thing a person can ever really do is keep moving forward. Take that big leap forward without hesitation, without once looking back. Simply forget the past and forge toward the future."

It has been tough times for all of us and let me start this message by hoping that all of you are safe and healthy when you read this. Even through the tough times SICASA Ernakulam has been committed to working for the students, and helping the students push through the adversities that are put forward by the pandemic that we are facing right now.

It's a fact that children will know this year through their history books, as life itself has changed. Students watch TV and use the internet to study, for the first time parents are saying "go watch the TV", Sanitizers have become a part of life and eating out is a dream for many, however SICASA Ernakulam conducted events that are firsts in the history of our branch.

Considering the heat of the lockdown and the mental stress and uncertainty that it has brought upon the students, we have conducted a webinar on Managing stress by Ms. Rebecca Chandy, on the 20th of this month. It was conducted as an interactive session, so that students could interact with the Faculty and we have received a very positive feedback from the students who attended.

Another highlight for the month was the webinar held by CA. Deepa Varghese and on the topic SQC -1 and Audit Documentation, this too was conducted as an interactive session.

I think what will go down in the history books of SICASA Ernakulam is the Leadership Summit, conducted jointly with Nagpur and Amaravati Branch of WICASA, along with 9 other branches. This is the first time SICASA Ernakulam is collaborating with another region, and I feel this brings the community of students closer and helps with the idea of us being a big family.

I want to take this time to thank all the students who have supported SICASA and its activities, and we are dedicated to finding innovative ways to help the students in every way possible. Let's all respect the policies brought forward by the Government and come out of this pandemic unscathed. Let's push forward, because if we don't, we'll get pushed back.

**CA Allen Joseph,
Chairman, SICASA Ernakulam Branch.**

Secretary's Report

Hello friends,

"The secret to getting ahead is getting started." - Mark Twain.

With all the distractions, the only way to move ahead is to concentrate on the task at hand. This was exactly what we tried to do by understanding the requirements of the student fraternity, SICASA Ernakulam was able to make possible, of course with all your continued support, events that are worth noting and a few that are firsts in the history of SICASA Ernakulam.

We commenced with a webinar by CA Deepa Varghese on the topic SQC 1 and audit documentation on the 12th of June 2020. We got a huge response from the students and all of them felt the topic important and was keen on listening throughout the session. The webinar was conducted in such a way that students could interact with the speaker and clear their doubts.

With a lot of negativity around us now it is high time that we consider our mental health as well. Being a CA student is not just an easy task and it requires a lot of hard work, perseverance, and positive-thinking to move forward. Managing stress and guiding our emotions is something that most of us need to work on. Keeping this in mind a webinar was conducted on the topic of managing stress and depression. The session was handled by Ms. Rebecca Chandy on the 20th of this month. Also the question and answer session were properly utilized by the participants to clear their doubts.

And finally, a coordinated event with the support of 9 other branches of WICASA took place where people from all over the country took part competing against each other to win the best speaker citation. The finals were conducted live on YouTube in the presence of renowned Chartered Accountants. We are here to help you, feel free to ask and stay connected to us by continuing your support. Study hard and let's make our effort pay off. All the very best.

**Phoebe Reena George,
Secretary, SICASA Ernakulam Branch.**

Editor's Note

**PRESERVE UR ENVIORNMENT !
PRESERVE UR HEALTH !**

Duke Jose

Poornendu M Nair

Alan Thampi

The World Environment Day, also known as 'Eco Day' marked the importance of the environment in our lives. People across the world take oaths to protect the environment from losing its glory, most of which is contributed by the activities the human species has been engaging in since the start of the modern era. Ironic enough, this year the theme of the World Environment Day was 'Time for Nature'. The committee organised an environmental day programme wherein the students devoted their time for nature by planting saplings within their homes. The COVID-19 pandemic may be stressful for people. Fear and anxiety about a new disease and what could happen can be overwhelming and cause strong emotions in adults and children. Public health actions, such as social distancing, can make people feel isolated and lonely and can increase stress and anxiety. However, these actions are necessary to reduce the spread of COVID-19. Coping with stress in a healthy way will make you, the people you care about, and your community stronger. "Unless we act now to address the mental health needs associated with the pandemic, there will be enormous long-term consequences for families, communities and societies."

Steps In Containing Any Sickness Anytime/anywhere.

S-Social Distancing (6 feet apart-approximately 2 arms)

I-Isolate yourself from others (Isolate yourself before it's too late)

C-Carry a sanitizer (Weapon of mass destruction)

A-Always wash your hands (Ignore the people who say your soap is slow)

S- Safety Mask (All superheroes like Batman, spiderman, Ironman wears a mask)

A-Avoid touching your face (#challenge #Last to touch the face loses)

Be Strong! Because things will get better, "It may be stormy now, but it never rains forever", so Stay Safe!

DATA MINING

By
DODDANAGOUDAA POLICE PATIL
SRO0670214

HAPPY CHARTERED ACCOUNTANTS DAY TO MY ALL CA FRIENDS....

A 2018 Forbes survey report says that most second-tier initiatives including data discovery, Data Mining/advanced algorithms, data storytelling, integration with operational processes, and enterprise and sales planning are very important to enterprises. We are in an age often referred to as the information age. In this information age, because we believe that information leads to power and success, and thanks to sophisticated technologies such as computers, internet, artificial intelligence, satellites, etc.,

WHAT IS DATA MINING ...???

Data mining refers to extracting or mining knowledge from large amounts of data. The term is actually a misnomer. Thus, data mining should have been more appropriately named as knowledge mining which emphasizes mining from large amounts of data.

It is the computational process of discovering patterns in large data sets involving methods at the intersection of artificial intelligence, machine learning, statistics, and database systems.

The overall goal of the data mining process is to extract information from a data set and transform it into an understandable structure for further use. The key properties of data mining are Automatic discovery of patterns Prediction of likely outcomes Creation of actionable information Focus on large datasets and databases

WHAT ARE THE TASKS IN DATA MINING ..???

Data mining involves six common classes of tasks:

- **Anomaly detection (Outlier/change/deviation detection)**–The identification of unusual data records, that might be interesting or data errors that require further investigation.
- **Association rule learning (Dependency modelling)**– Searches for relationships between variables. For example a supermarket might gather data on customer purchasing habits. Using association rule learning, the supermarket can determine which products are frequently bought together and use this information for marketing purposes. This is sometimes referred to as market basket analysis.
- **Clustering**– It is the task of discovering groups and structures in the data that are in some way or another "similar", without using known structures in the data.
- **Classification**– It is the task of generalizing known structure to apply to new data. For example, an e-mail program might attempt to classify an e-mail as "legitimate" or as "spam".
- **Regression**– Attempts to find a function which models the data with the least error.
- **Summarization**– Providing a more compact representation of the data set, including visualization and report generation.

ARCHITECTURE OF DATA MINING

- **KNOWLEDGE BASE:**

This is the domain knowledge that is used to guide the search or evaluate the interestingness of resulting patterns. Knowledge such as user beliefs, which can be used to assess a pattern's interestingness based on its unexpectedness, may also be included. Other examples of domain knowledge are additional interestingness constraints or thresholds, and metadata (e.g., describing data from multiple heterogeneous sources).

- **DATA MINING ENGINE:**

This is essential to the data mining system and ideally consists of a set of functional modules for tasks such as characterization, association and correlation analysis, classification, prediction, cluster analysis, outlier analysis, and evolution analysis.

- **PATTERN EVALUATION MODULE:**

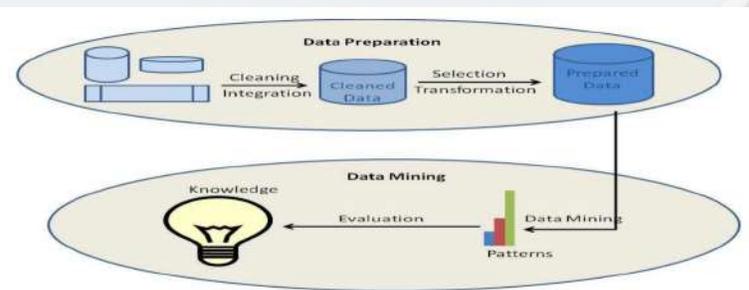

This component typically employs interestingness measures that interact with the data mining modules so as to focus the search toward interesting patterns. It may use interestingness thresholds to filter out discovered patterns. Alternatively, the pattern evaluation module may be integrated with the mining module, depending on the implementation of the data mining method used.

- **USER INTERFACE :-**

This module communicates between users and the data mining system, allowing the user to interact with the system by specifying a data mining query or task, providing information to help focus the search, and performing exploratory data mining based on the intermediate data mining results.

DATA MINING PROCESS :-

Data Mining is a process of discovering various models, summaries, and derived values from a given collection of data. The general experimental procedure adapted to data-mining problems involves the following steps:-

- **DATA CLEANING**

Data cleaning is the process where the data gets cleaned. Data in the real world is normally incomplete, noisy and inconsistent. The data available in data sources might be lacking attribute values, data of interest etc. For example, you want the demographic data of customers and what if the available data does not include attributes for the gender or age of the customers? Then the data is of course incomplete. Sometimes the data might contain errors or outliers. An example is an age attribute with value 200. It is obvious that the age value is wrong in this case. The data could also be inconsistent.

- **DATA INTEGRATION**

Data integration is the process where data from different data sources are integrated into one. Data lies in different formats in different locations. Data could be stored in databases, text files, spreadsheets, documents, data cubes, Internet and so on. Data integration is a really complex and tricky task because data from different sources does not match normally. Suppose a table A contains an entity named customer id where as another table B contains an entity named number. It is really difficult to ensure that whether both these entities refer to the same value or not.

- **DATA SELECTION**

Data mining process requires large volumes of historical data for analysis. So, usually the data repository with integrated data contains much more data than actually required. From the available data, data of interest needs to be selected and stored. Data selection is the process where the data relevant to the analysis is retrieved from the database.

- **DATA TRANSFORMATION**

Data transformation is the process of transforming and consolidating the data into different forms that are suitable for mining. Data transformation normally involves normalization, aggregation, generalization etc. For example, a data set available as "-5, 37, 100, 89, 78" can be transformed as "-0.05, 0.37, 1.00, 0.89, 0.78". Here data becomes more suitable for data mining. After data integration, the available data is ready for data mining.

- **DATA MINING**

Data mining is the core process where a number of complex and intelligent methods are applied to extract patterns from data. Data mining process includes a number of tasks such as association, classification, prediction, clustering, time series analysis and so on.

- **PATTERN EVALUATION**

The pattern evaluation identifies the truly interesting patterns representing knowledge based on different types of interestingness measures. A pattern is considered to be interesting if it is potentially useful, easily understandable by humans, validates some hypothesis that someone wants to confirm or valid on new data with some degree of certainty.

- **KNOWLEDGE REPRESENTATION**

The information mined from the data needs to be presented to the user in an appealing way. Different knowledge representation and visualization techniques are applied to provide the output of data mining to the users.

DATA MINING TECHNIQUES

Broadly speaking, there are seven main Data Mining techniques. They are as follows:-

- **STATISTICS :-**

It is a branch of mathematics which relates to the collection and description of data. A statistical technique is not considered as a Data Mining technique by many analysts. However, it helps to discover the patterns and build predictive models.

- **CLUSTERING :-**

Clustering is one of the oldest techniques used in Data Mining. It is the process of identifying similar data that are similar to each other. Clustering is called segmentation and helps the users to understand what is going on within the database.

- **VISUALIZATION :-**

Visualization is used at the beginning of the Data Mining process. It is useful for converting poor data into good data letting different kinds of methods to be used in discovering hidden patterns.

- **A DECISION TREE :-**

It is a predictive model and the name itself implies that it looks like a tree. In this technique, each branch of the tree is viewed as a classification question. It leaves the trees which are considered as partitions of the dataset related to that particular classification. This technique can be used for exploration analysis, data pre-processing and prediction work.

- **ASSOCIATION RULE :-**

Association Rules help to find the association between two or more items. It helps to know the relations between the different variables in databases. Association rules discover the hidden patterns in the data sets which is used to identify the variables and the frequent occurrence of different variables that appear with the highest frequencies.

- **NEURAL NETWORKS :-**

Neural Network is another important technique used by people these days. This technique is most often used in the starting stages of the Data Mining technology. Neural networks are very easy to use as they are automated to a particular extent and because of this the user is not expected to have much knowledge about the work or database.

USES OF DATA MINING :-

Data mining is used for examining raw data, including sales numbers, prices, and customers, to develop better marketing strategies, improve the performance or decrease the costs of running the business. Also, Data mining serves to discover new patterns of behavior among consumers.

Data Mining is used for predictive and descriptive analysis in business:

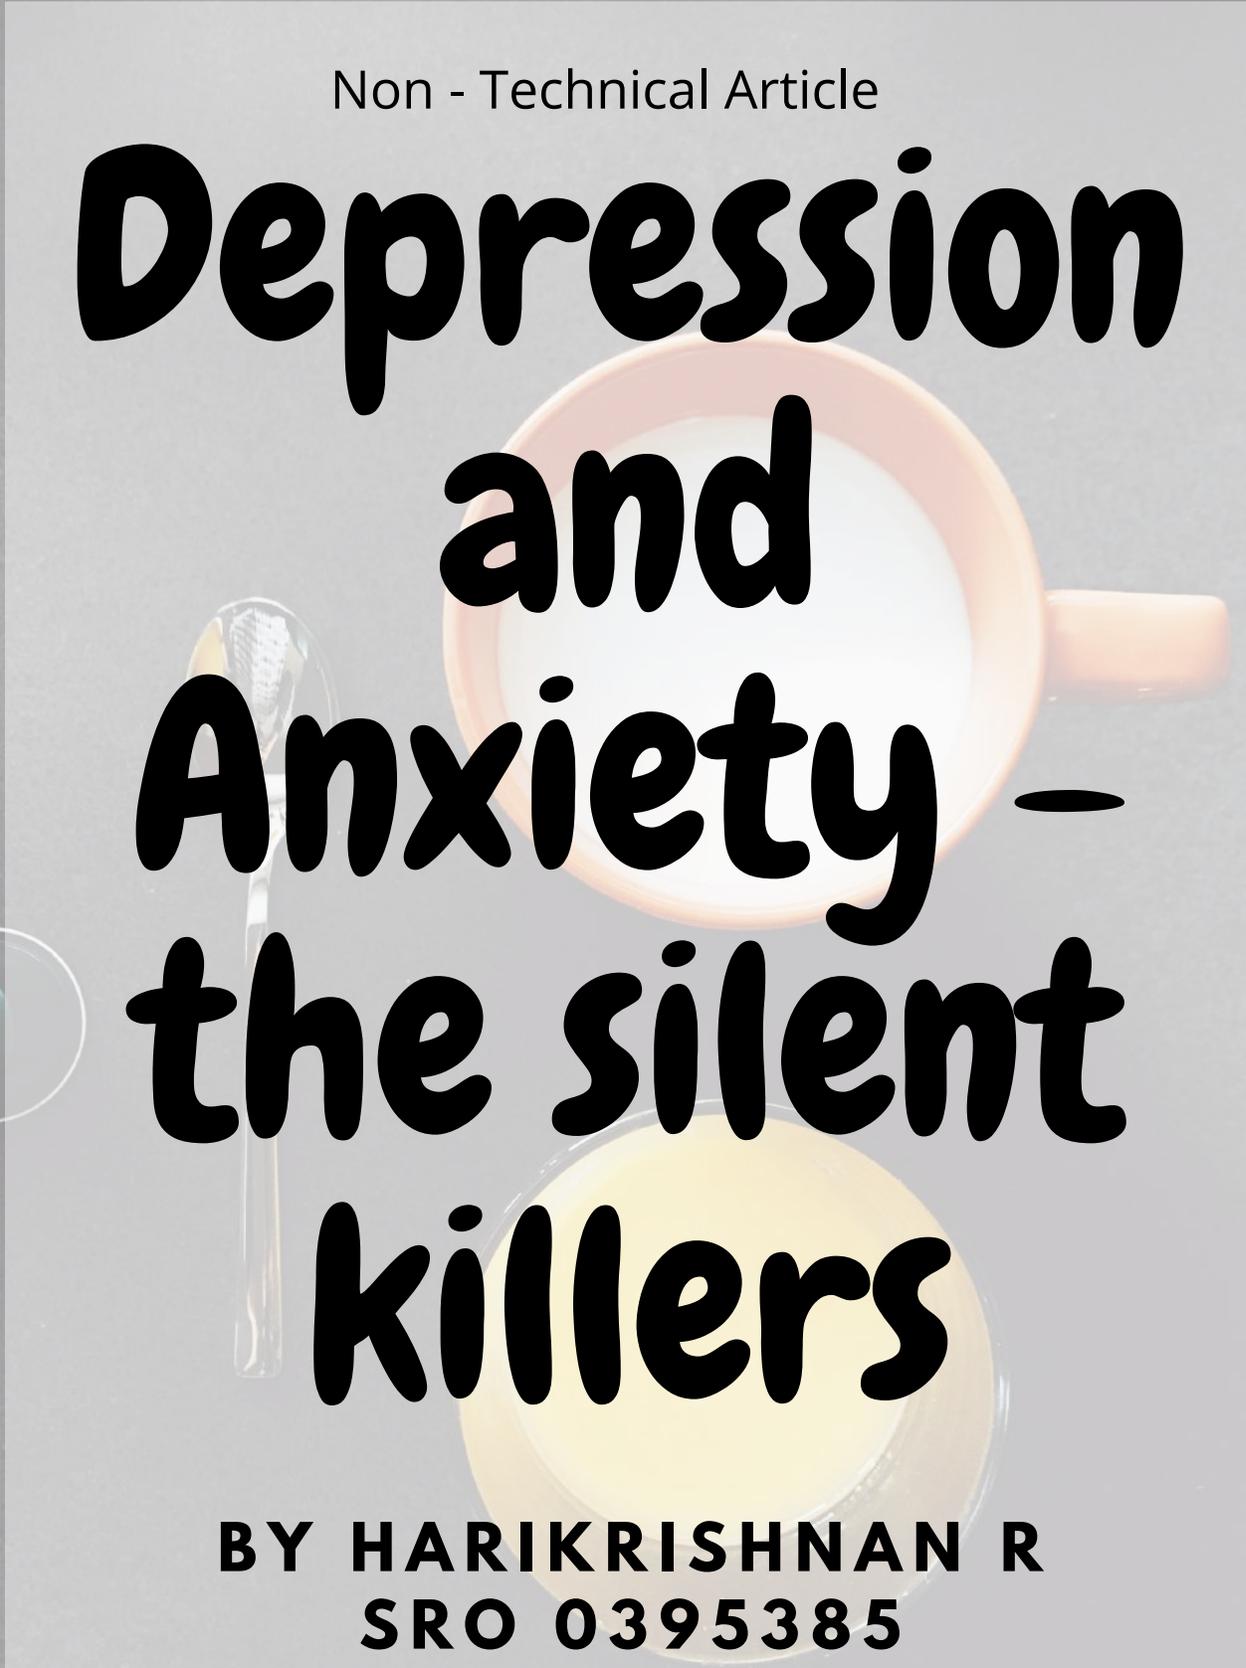

- 1.The derived pattern in Data Mining is helpful in better understanding of customer behavior, which leads to better & productive future decision.
- 2.Data Mining is used for finding the hidden facts by approaching the market, which is beneficial for the business but has not yet reached.
- 3.It is also used for identifying the area of the market, to achieve marketing goals and generate a reasonably good ROI.
- 4.Data Mining helps in bringing down operational cost, by discovering and defining the potential areas of investment.

CONCLUSION :-

Finally Data mining along with traditional data analysis is a valuable tool that is being used in Strategic Enrollment Management to achieve desired enrollment targets in colleges and universities. In situations where it has been applied, it has been proven to successfully predict enrollment, at least to a degree. More research is needed to fully take advantage of the data mining processes and technologies.

Depression and Anxiety - the silent killers

By
Harikrishnan R
SRO 0395385

Since this is a sensitive topic, let me first start with a disclaimer. I'm not a medical professional, only a student like you. So what I'd like to share through this article, using the SICASA Ernakulam Newsletter as my platform is a summary of the interactions I've had with my friends. These suggestions are not to be taken as treatments, but rather information you can use in the long - run.

If you suffer from extreme Anxiety or show signs of depression, PLEASE GO SEE A MENTAL HEALTH PROFESSIONAL. It's 2020 guys, It's not a taboo anymore..

Let's start -What Anxiety and depression are

The struggle starts with understanding what We're dealing with first. Anxiety and depression i think are used by the common man as synonyms. which is not so.

Let's take a look at what these terms mean first.

Anxiety is more or less a normal emotion. It is your brain's reaction to stress and alerting you of potential danger ahead. Everyone feels anxious now and then for example, you might be anxious when you're handed an important audit assignment, before your exams etc.

So from this we should understand that occasional anxiety is ok, but It's anxiety disorders you should look out for.

They're a group of mental illnesses that causes constant and overwhelming fear. Excessive anxiety can have you missing classes, not focussing on work, screwing up your exams, and it may have physical manifestations as well.

Depression Depression, according to the WHO is the main cause of disability worldwide (cited in a well known medical website). Yeah It's that serious and It's that common, and you thought you were alone ??

Depression can be said to be a mood disorder that involves a persistent feeling of sadness and loss of interest. It is definitely different from the mood fluctuations that people regularly experience as a part of life.

What We're going through

It's not surprising to say that we're going through a tough time, the kind of one that finds place in history books worldwide. The kind that gives you the right to say, "I SURVIVED THROUGH A GLOBAL PANDEMIC, GET YO SELF TO SCHOOL" to your child when he/she tries to fake a cold to skip school.

The lockdown however has taken a huge toll on mental health as well. A lot of us feel stressed, trapped and insecure.

Suddenly shopping is off because you don't want to be infected, so is hanging out with your best friend. The mall is not even an option, and the news and Internet is your only distraction.

The News is mostly negative, discussing death tolls every day, and the internet can add value, but we choose to binge watch series a few of those depressing too.

More about these killers

Anxiety and depression, like I mentioned earlier aren't really that uncommon, because from what I understand a few of the people who talked to me had been worrying about something and this has affected their day to day life and a more have been depressed at least once due to different reasons.

Maybe you're going through the lockdown alone and away from home, maybe you're stuck with toxic people and thoughts all on your own.

But I feel that you should realise, all the things we have that's nice, our health, our family, food on our table and clothes on our back and even if not for all that, a student's organization that's always got your back.

I'm sorry, couldn't help it, do forgive me for the rhyme, but I personally attended the webinar by Ms. Rebecca Chandy and the value addition from it and the answers to my queries that I got are the inspiration to conduct a small research among my close circle of friends and to write this article. So, Thank You Ma'am.

Be it stressing about your exams, your career, getting married, falling in love or being depressed about a breakup, about failing your exams, peer pressure, pressure from your office or pressure from home, the reasons vary, the outcome is the same.

IT AFFECTS YOUR LIFESTYLE.

What they all did

As part of the small conversation I had with friends that I've been referring to as research, all of them told me what they did, or what they're doing to get better, and I'll discuss the same, only with this condition.

"THESE ARE NOT REMEDIES OR CURES FOR ANXIETY DISORDER OR DEPRESSION. I URGE YOU TO CONSULT A MEDICAL PROFESSIONAL. THESE ARE ONLY THE RESPONSES I GOT FROM PEOPLE".

- **Taking time out - Cliche but effective.**

Taking time out of your daily lives to practice Yoga, Listening to music, getting a massage, or learning relaxation techniques. It's sometimes true that stepping away from the problem helps you control these feelings.

- **Eating well - Nope not stress eating, there's a difference.**

Eating healthy food and maintaining a healthy diet, eating on time etc. can do wonders.

- **Get Enough sleep - Time for a lullaby**

Understand this, no thought, person or thing should be more important than the healthy sleep you should be getting, and what I hear the most is that you can't sleep because you're anxious.

What worked for a few are apps that make relaxing sounds but please make sure you don't strangle yourself in your headphones.

- **Get Busy - Not in Bed**

The thing that helps a lot of people is to stay busy, I guess it's rightly said that an idle mind is a devil's workshop. Let's not stay idle and as an added bonus after each task you accomplish you feel a little good about yourself, which goes a long way in improving your self esteem.

- **Welcome humor**

Next time you choose a series to binge watch don't choose one that's depressing and in a language you can't understand, save that for later. Watch one that makes you laugh, even Rom-Coms are fine as long as it doesn't remind you too much of your Ex.

- **Learn your triggers**

Learn what triggers your anxiety and the root cause of your depression, that may sometimes be hard to do on your own, maintain a journal, log your thoughts every time you have panic attacks or anxious thoughts, talk to a friend and ask them to listen and help you figure it out, but I'll say this again, the best thing you can do would be to consult a medical professional.

- **Work out - Again, Cliche, but effective.**

Working out helps you in many ways, your overall health improves, you can probably come out with an awesome physique and it makes you feel good about yourself, set up workout goals, they really help. I'd suggest Darebee.com for awesome workouts, but do read the description of each workout and their disclaimer before you proceed.

The conclusion

I understand how you feel if you're going through this and Trust me, you're not alone.

I firmly believe that mental health should be treated at par with Physical health and can just as devastating, if ignored.

You catch a cold, or let's say you have an infection, wouldn't you go to the doctor ?
The same goes with your mind, a broken mind can break you from the inside.

I thank SICASA Ernakulam for providing me a platform to convey my message, and I urge you all to reach out if you feel like it's too much.

IMPORTANT NOTIFICATIONS!

1. Guidance Report on Section 92E(Transfer Pricing)_(02-06-2020).
